FLUCTUATIONS OF THE MER DE GLACE (Mont Blanc area, France) AD 1500–2050

UNIVERSITÄTSVERLAG WAGNER · INNSBRUCK

Contents of Volume 40 (2005/2006)

Part I:

The history of the Mer de Glace AD 1570–2003 according to pictorial and written documents

5

1	Introduction	11
1.1	Glacier fluctuations as a climate indicator	11
1.2	The “Little Ice Age” concept	12
1.3	Glacier change in the Mont Blanc area	14
2	Study site: the Mer de Glace area	20
2.1	Geographical setting of the Mer de Glace	20
2.2	Short outline of the geomorphology and geology of the Mont Blanc massif	24
2.3	Climate of the Mont Blanc area	26
3	Data and methods	28
3.1	Methods for investigations of glacier change	28
3.2	Historical data and methods	30
3.3	Generation of digital elevation models for the Mer de Glace	49
4	Results	51
4.1	Revised glacier length curve for the Mer de Glace	51
4.2	Volume changes of the Mer de Glace in the 20 th century	111
5	Discussion	117
5.1	The new Mer de Glace length curve viewed in the context of other existing glacier length curves	117
5.2	Glacier change at the Mer de Glace	123
6	Conclusions	126
7	Appendix	135
7.1	Appendix 1: Description of the valley of Chamonix by Bernard Combet, 1580	135
7.2	Appendix 2: Additional pictorial documents	138

Part II:

The application of a neural network to the length record of the Mer de Glace

141

1	Introduction	144
2	Data and methods	146
2.1	Multi-proxy reconstructions of temperature and precipitation back to 1500	146
2.2	Climate scenarios 2000–2050	147
2.3	The response time of glaciers	149
2.4	The back-propagation neural network model	150
3	Results	155
3.1	Results of the neural network simulations	155
4	Discussion	163
4.1	Neural networks in glaciological contexts	163
5	Conclusions	167
6	Appendix	172
